Student info

Student name and ID need to be given so that it can store data for further details.

Loophole: student info is not able to use for new course and dropping course after exiting file.

New course add

NUMBER of course needs to be given .

Loophole: Existing file can't be used for second time taking or dropping course.

Adding extra course

Same as new course

Loophole: student info/new course data is not able to use for new course and dropping course after exiting file.

Dropping unwanted course

Dropping doesn't work properly it goes to infinite loop

Loophole: student info/new course data is not able to use for new course and dropping course after exiting file.

Future work:

1. Files needs to added for course details
2. Files for storing student information for further use.
3. Adding course should ask student info and match it and then store data.
4. Dropping should ask student info and specific course details and then drop the course. Error of infinite loop should be reduced.
5. Course should be taken/drop credit wise.
